

Applicant and criminal live scan solutions must be able to face the challenges of a “wild west” marketplace where every industry, every state, and every government has its own set of regulations— with more being added daily. Fulcrum Biometrics’ **FbF® Livescan** is at the cutting edge of live scan technology, and able to keep pace with the changes and demands of a world relying more and more heavily on biometrics.

FbF Livescan is FBI Appendix F certified to meet its Image Quality Standard (IQS) requirements for finger and palm prints (EBTS, 500 ppi, WSQ compression) and customizable to meet state specific requirements. **FbF Livescan** can be operated easily (even by first time users) because of its simple interface that prompts the operator through the steps of capturing fingerprint slaps and rolls.

Features

- Ready to implement (out-of-the-box) features allowed by FBI Next Generation Identification (NGI) standards for live scan
- Easy-to-use graphical interface, requiring minimal training
- Expandable – add on additional live scan packages to increase your fingerprinting opportunities
- Multi-biometrics friendly – some live scan packages enable you to capture palm prints, scars, marks, and tattoos (SMTs), mugshots, signatures and iris images
- On-screen visualization of finger image quality with scoring
- Large capacity storage of transactions
- Built-in print-to-card functionality (requires additional license)
- Supports electronic submissions (SMTP, FTP)
- Scanner agnostic – certified with a variety of 10-print and palm scanners
- Facilitates off-site fingerprint collection for printing/transmitting at a later time
- Touch-screen friendly
